

Fig. 1

X = Possible state of roadway

■ = Depending on the measured temperature, may apply to only one line

|  | icy roadway    | snow-covered roadway | loose underlying surface | deep water | shallow water | dry roadway |
|--|----------------|----------------------|--------------------------|------------|---------------|-------------|
| Roadway temperature measurement (redundancy)           | very low temp. | X                    | X                        | X          |               | X           |
|  | slight frost   | X                    | X                        | X          | X             | X           |
|  | over 0°C       |                      |                          | X          | X             | X           |
| Optical/acoustic method for detecting snow and ice     | X              | X                    |                          |            |               |             |
| Optical/acoustic method for detecting water            |                |                      |                          |            | X             |             |
| Optical/acoustic method for detecting a dry roadway    |                |                      |                          |            |               | X           |
| Evaluation of the adhesion curves gentle initial slope |                | X                    | X                        | X          |               |             |
| •  |                |                      |                          |            |               |             |
| •  |                |                      |                          |            |               |             |
| •  |                |                      |                          |            |               |             |
